Question 1 | Correct | Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("*");
                printf("*");
                break;
            }
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
1  #include<stdio.h>
2  void func(int n)
3  {
4      int count=1;
5      if(n==1)
6      {
7          count++;
8      }
9      else
10     {
11         for(int i=1; i<=n; i++)
12         {
13             count+=2;
14
15             for(int j=1; j<=n; j++)
16             {
17                 count+=2;
18
19                 break;
20             }
21             count++;
22         }
23         count++;
24     }
25     printf("%d",count);
26 }
27
28
29 int main(){
30     int n;
31     scanf("%d",&n);
32     func(n);
33 }
34
```

	Input	Expected	Got	
✓	2	12	12	✓
✓	1000	5002	5002	✓
✓	143	717	717	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
