Question 1 | Correct | Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
    int rev = 0, remainder;
    while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;
    }
    print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
1  #include<stdio.h>
2  void reverse(int n)
3  {
4      int count=1;
5      int rev = 0, remainder;count++;
6      while (n != 0)
7      {
8          count+=4;
9          remainder = n % 10;
10         rev = rev * 10 + remainder;
11         n/= 10;
12     }
13     count++;
14     printf("%d",count);
15 }
16
17
18 int main(){
19     int n;
20     scanf("%d",&n);
21     reverse(n);
22 }
```

	Input	Expected	Got	
✓	12	11	11	✓
✓	1234	19	19	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
